

SLOW GLOW

PREMIUM HUNTING PRODUCTS

OUR BRAND

Slow Glow Hunting is entering its 8th year in business. What started as Dad tinkering in the garage more than 30 years ago, has evolved into a family-owned business that has revolutionized the night hunting industry. We represent HAND-BUILT, AMERICAN MADE products that are built by our immediate family on our ranch in the Texas Hill Country. We back our craftsmanship with an unconditional 1-year warranty, we are proud to offer the highest quality products in the industry.

HAND-BUILT AMERICAN-MADE PRODUCTS UNDER \$200

WILD HOGS

EXOTIC GAME

PREDATORS

The Slow Glow G3 Hunting Light is our third-generation LED Hunting Light. The G3 is designed to be mounted on a T-Post 5 feet off the ground about 20 feet away from your feeder or hunting area. The G3 will stay off during the day, and turn itself on automatically at dusk to a dull 5% Training Mode. Once motion is detected in your hunting area, the G3 will slowly increase light intensity over a 2-minute period to avoid spooking game. Wild pigs, exotic game, and predators never realize they're being lit up. Use your light like an alarm and stalk in down wind behind the cover of your Slow Glow after motion is detected. Manually activate your light from more than 100 yards away with the included remote control. G3 easily switches between Red or Green light, and features 2 different lenses for a spot or flood beam pattern. A powerful rechargeable 12v feeder battery will run your light for 3-4 nights of hunting, or add our SolR Pro to keep your light out in the field running year-round.

GREEN LIGHT

RED LIGHT

INFRARED

Our model IRG3 is very similar to our signature G3, but instead of switching between visible green and red light, our IRG3 switches between visible green light and invisible 850 nanometer infrared light. This gives hunters with night-vision optics the ability to light more than 6000 sqft of hunting area with invisible light. Hunters no longer have to use gun or scope mounted IR illuminators that blow out everything between you and the target. The IRG3 works as 2 lights, as it's still able to cast visible green light by plugging in to the green power barrel.

Our MAVERICK Ball-head T-Post Clamp is the most secure way to attach anything with a 1/4" x 20 thread securely to a t-post. Perfect for Slow Glow lights, trail cameras, Solar Panels, GoPro Cameras, and other accessories. Pivot and tilt your accessory exactly where you need and lock it down. For only \$25, this is a must have for anyone that owns a Trail Camera!

The SolR Pro paired with a Slow Glow Hunting Light is the ultimate combination. The SolR Pro features a powerful 5w solar panel and digital charge controller to keep the system running year-round. When in direct sunlight, the SolR Pro harnesses enough energy to run both a Slow Glow Light and a trail camera year-round. SolR Pro also features a digital volt meter to monitor your battery's voltage, and provides a USB power port to charge a phone, GoPro Camera, or other USB device in the woods where power is hard to find.

SolR Pro is designed to slide on top of a T-Post and swivel 360 degrees to face south for maximum sunlight. Then choose 1 of 6 mounting locations to mount your light, trail camera, or other accessory. We include (2) ball-head pivot mounts with every SolR Pro, which allows you to swivel and tighten your accessory exactly where you want it.
